

## *Space Music*

One of *NASA*'S observatories discovered a giant black hole that hums. Located in the Perseus cluster of galaxies about 250 million light years from Earth, the black hole vibrates at the frequency of a B flat. But it is too low a pitch to be picked up by the human ear. Scientific instruments have placed the note at 57 octaves below middle C on the piano. Interesting indeed!

The idea of music in our universe is not a new idea or discovery. In fact, when God revealed himself to Job, He said, "Where were you when I founded the earth...While the morning stars sang together and all the sons of God shouted for joy?" We are told that at creation, songs of praise and shouts of joy resounded in our universe to God's glory.

A wonderful hymn by St. Francis of Assisi capture the awe and beauty we feel when enjoy the sun filled days or the star studded sky by night.

*All creatures of our God and King  
Lift up your voice and with us sing*

*O praise Him, Alleluia*

*Thou burning sun with golden beam  
Thou silver moon with softer gleam*

*O praise Him, O praise Him  
Alleluia, Alleluia, Alleluia*

The beauty of creation gives us reasons to sing God's praises. May we enjoy the creation our Creator has given us!

***Together through prayer and service,***

***Deacon Mike***
